SUMMARY

Frontend developer with 3+ years building accessible, tested React and TypeScript apps, after five years of freelance web work. I currently own the frontend of a large React platform end to end: architecture, design system, code reviews and releases. Accessibility is part of how I build, not a final check, and every screen I ship meets WCAG. On the side I build AI agent skills for Claude Code, including LinkedIn Agent Italia, an open-source pack of 13 skills.

TECHNICAL SKILLS

Frontend	React, TypeScript, JavaScript, Next.js, TanStack Start, Astro, React Native, HTML, CSS, Tailwind CSS
State and data	Redux Toolkit, Redux-Saga, TanStack Query, GraphQL, REST APIs
Architecture	Micro Frontends, design systems, reusable component libraries
Accessibility and testing	WCAG, Jest, Cypress, Vitest, Playwright, axe
Backend and cloud	Node.js, PostgreSQL, Drizzle ORM, Firebase, Cloudflare Workers
CI/CD and tools	Azure DevOps, GitHub Actions, Git, Figma
AI	Claude Code, AI agent skills and plugins, Python

EXPERIENCE

Front-End Developer · Experis · Remote — Jul 2026 – Present

Own the frontend of a large React platform from start to finish. With no frontend lead above me, I make the architecture calls, plan the work, review the code and ship every release.

- Designed the Micro Frontend architecture, so each feature is built, tested and released on its own, even with several teams on the same product.
- Built the design system from scratch and own the UI/UX, from Figma files to the React and TypeScript components the whole team reuses.
- Set the accessibility bar for the product: every screen meets WCAG.

Front-End Developer · Stackhouse · Cagliari, Italy — Dec 2022 – Jul 2026

Software house building complex web and mobile products for clients. This is where I learned to ship in a real team.

- Built and maintained client apps in React, TypeScript and React Native, from first prototype to production.
- Developed Micro Frontend modules the team could release independently.
- Integrated GraphQL and REST APIs and managed complex state with Redux Toolkit and Redux-Saga.
- Turned Figma designs into reusable, responsive components, working side by side with designers, backend developers and QA in an Agile team.
- Wrote unit and end-to-end tests with Jest and Cypress, run through CI/CD pipelines on Azure DevOps and GitHub Actions.

Freelance Web Developer · Self-employed · Cagliari, Italy — 2017 – 2022

- Designed and built websites for local businesses, from first brief to launch.
- Built a time-tracking app that employees used to log their hours.

PROJECTS

LinkedIn Agent Italia · Open source (MIT) · github.com/JacopoMarini/linkedin-agent-italia Nov 2026

- Rebuilt an English pack of Claude skills for LinkedIn for the Italian language: 13 skills, including two I added for bilingual posts and for writing about technical work without leaking client data.
- Built an Italian humanizer with a lexicon of 127 clichés and 16 typical structures, scored by a five-check panel written in Python with Claude Code.

Website and staff portal for Solky Care · Social cooperative, Italy Nov 2026 – In progress

- Public site in Astro 6: static pages, bilingual (Italian and English), forms built on Astro Actions that work with JavaScript turned off, content managed by the client through Keystatic.
- Staff portal replacing a legacy app for hours, holidays and leave: TanStack Start, TanStack Query and Form, shadcn/ui, Tailwind CSS v4, PostgreSQL on Neon with Drizzle ORM, Better Auth.
- Deployed on Cloudflare Workers with nightly encrypted backups to R2; tested with Vitest, Playwright and axe accessibility checks.

Dev Zero to Hero · Founder

- Community where Italian developers learn to use Claude on real work.

EDUCATION

Full Stack Web Development Bootcamp · Boolean Jun – Nov 2022

- 700-hour full-time program; capstone team project: a food delivery site built from scratch.

Computer Science studies · University of Cagliari, Italy

LANGUAGES

Italian (native) · English (intermediate, B1)
